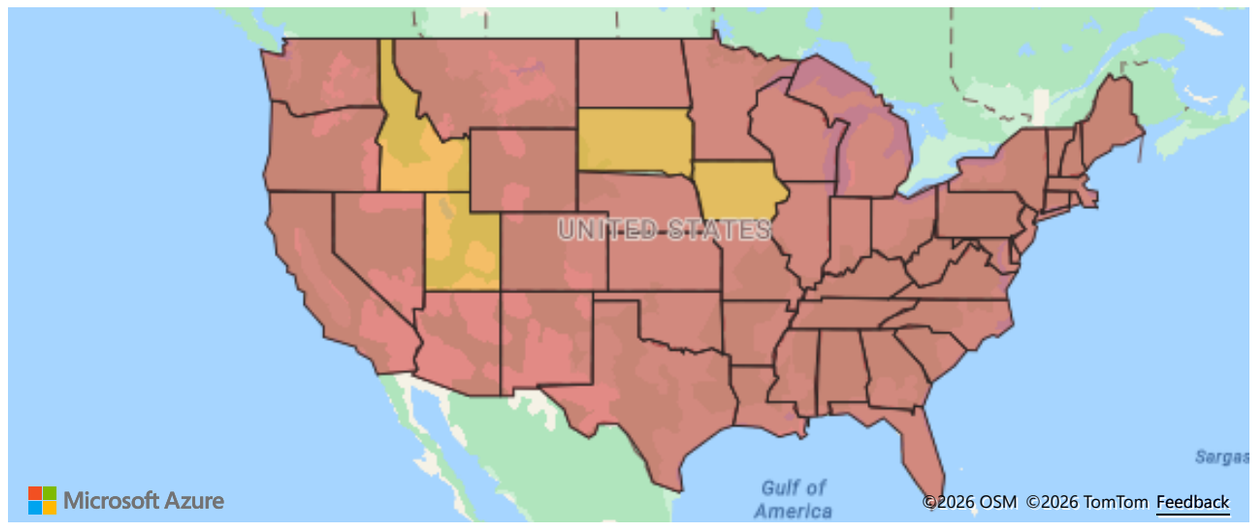
U.S. Distribution of Hospital Readmission Risk

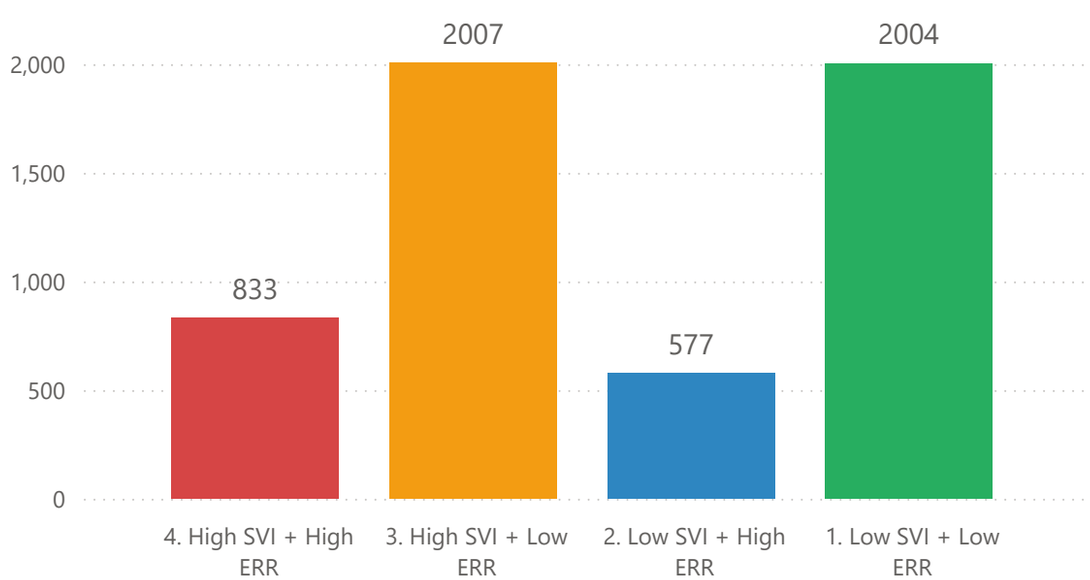
States are colored by combined clinical and social risk indicators

risk_bucket ● High SVI + High ERR ● High SVI + Low ERR ● Low SVI + High ERR ● Low SVI + Low ERR

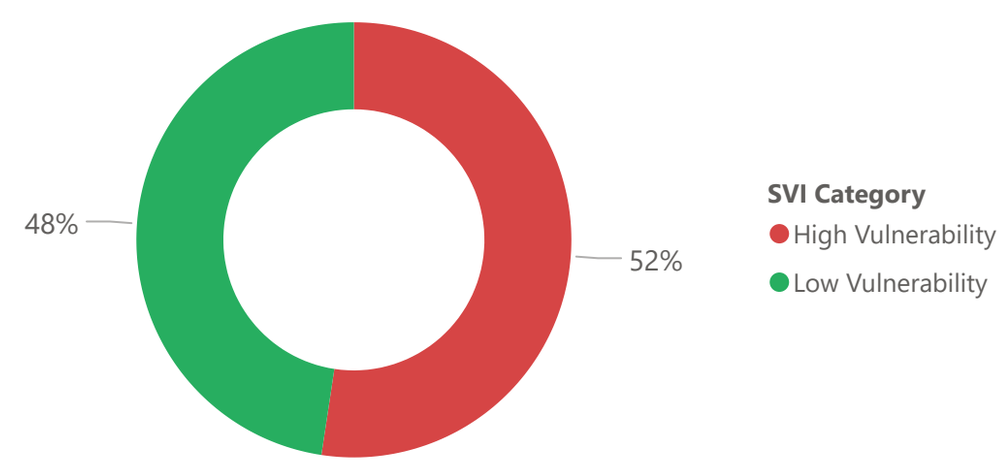


Most states show elevated readmission risk when combined with high social vulnerability. The bar chart below shows the full distribution of hospitals across risk categories.

Hospitals by Risk Category



Hospitals by Community Vulnerability



Risk Drivers: Social Vulnerability vs Hospital Readmission Performance

Identifying hospitals where elevated readmissions are driven by structural factors vs operational performance

National Overview | Risk Drivers | Hospital Explorer

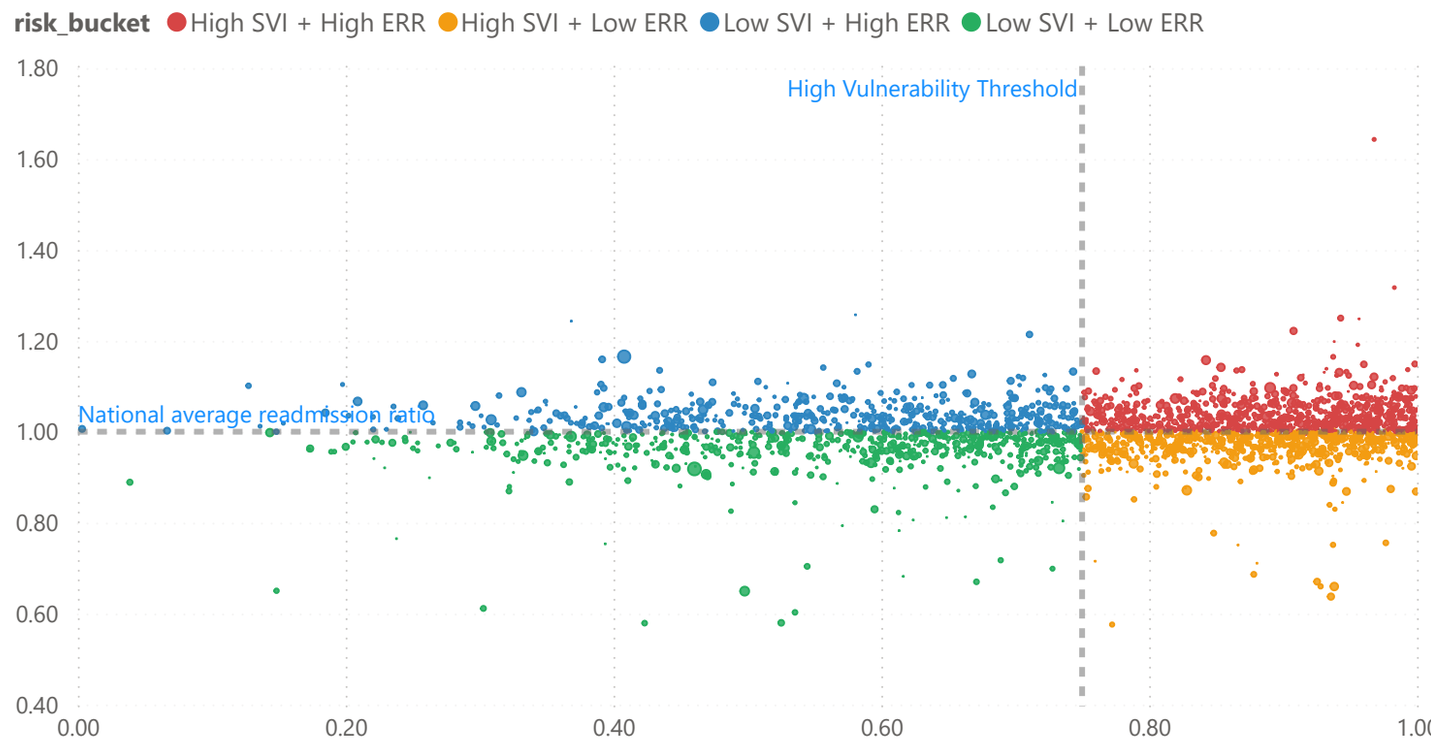
Hospital Readmission Risk vs Community Vulnerability

Each point represents a hospital. Bubble size indicates discharge volume.

Low Vulnerability
High Readmission Risk

High Vulnerability
High Readmission Risk

Hospitals in the upper-right quadrant experience elevated readmission risk while serving highly vulnerable communities, suggesting combined structural and operational challenges.



Low Vulnerability
Low Readmission Risk

High Vulnerability
Low Readmission Risk
